

PRESS RELEASE 14/09

COMPANY

Download CAD drawings for free

2D and 3D CAD drawings – available in various file formats – complement Turck's product database

Muelheim, June 18, 2009 – To enable its customers to utilize powerful CAD tools, Turck is complementing its comprehensive product database with an easy-to-use download tool for two- and three-dimensional CAD drawings. Fully integrated into the established database, the Cadenas-developed software enables users to generate and download various types of CAD files for sensor, fieldbus, interface and connectivity products – free of charge and without registration.

With only a few mouse clicks, users may generate the files needed directly from within the database: simply chose the product, mode of dispatch (e-mail or download) and file format – done! System specific and cross-system formats from JPEG or PDF, to DXF or IGES, to STEP guarantee high compatibility and applicability – whether two-dimensional images are needed for technical documentation purposes or three-dimensional models for more complex Solidworks applications.
