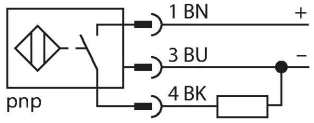
Wiring diagram



Functional principle

Magnetic field sensors are activated by magnetic fields and are used, in particular, for the detection of the piston position in pneumatic cylinders. As magnetic fields can permeate non-magnetizable metals, they detect a permanent magnet attached to the piston through the aluminium cylinder wall.

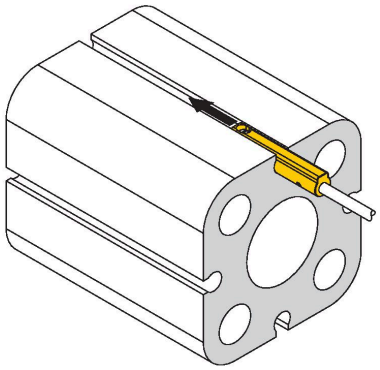
Mounting instructions

Mounting instructions/Description



The sensor is mounted in the groove from the side. If the screw is turned clockwise, it moves out of the thread and pushes the sensor upwards towards the cylinder. This fixes the sensor in place. A quarter turn of the screw with a slotted screwdriver is sufficient to fasten the sensor so that it doesn't vibrate. A tightening torque of 0.1 Nm is sufficient for safe mounting without damaging the cylinder. A cable clip is included in the scope of delivery. It enables smooth cable routing in the groove and ensures that the cable is fastened as securely as possible. The corresponding accessories for mounting on other cylindrical housings must be ordered separately.
