Wiring diagram

Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-2, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used. Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

Setting the switching point

The ultrasonic sensor features a switching output with a teachable switching point. The yellow LED indicates whether the sensor has detected an object in the taught window.

One switching point is taught. This must be within the detection range. In this operating mode the background is suppressed.

Teach

- Position the object at the desired switching point
 - Bridge pin 2 with the Ub for 2–7 seconds
- After a successful teach-in, the yellow LED flashes at 2 Hz and the sensor runs automatically in normal operating mode.

LED response

In normal operating mode, the yellow LED indicates the switching status of the sensor.

- Yellow: Object within the switching range
- Off: Object outside the detection range or signal loss
