

Isolating switching amplifier 4-channel IMX18-DI03-4S-5R-S/24VDC

The IMX18-DI03-... isolating switching amplifiers are equipped with intrinsically safe input circuits and transfer binary signals from the explosion-hazardous area to the non-explosion-hazardous area. Sensors according to EN 60947-5-6 (NAMUR) or potential-free contacts can be connected to the devices. The devices are also suitable for operation in Zone 2.

The IMX18-DI03-4S-5R-S/24VDC isolating switching amplifier has a 4-channel design. The device complies with the requirements of NE21. During transmission, the signals of the connected sensors and mechanical contacts are galvanically isolated. The output circuits are each equipped with a relay output (NO/NC configurable). The input signals are interpreted as low or high signals depending on the input level, and are output as a corresponding output signal. A separate relay output (NO) for collective fault signals is also provided.

The devices are configured via DIP and rotary coding switches on the front. The following operating modes are possible:

- 4-channel: Each input (E1, E2, E3, E4) is assigned an output (A1, A2, A3, A4)
- 4-way splitter: Input E1 is assigned output A1, A2, A3 and A4
- 2 × 2-way splitter: Input E1 is assigned output A1 and A2; input E3 is assigned output A3 and A4
- 1-channel + 3-way splitter: Input E1 is assigned output A1; input E2 is assigned output A2, A3 and A4

In addition, the input circuit monitoring for wire break and short circuit (on/off) and the output mode of the output circuits (NO/NC) can be configured for each channel. When using mechanical contacts, either line monitoring must be switched off or the contact must be wired with resistors (see wiring diagram).

The devices have a green power LED (Pwr). Each channel has a yellow status LED for the output and a red status LED for the input. A fault in the input circuit causes the red LED to flash according to NE44.

In the event of a fault (wire break or short circuit), the assigned outputs switch to the LOW level and the relay output for collective fault signals is activated.

The device can be used in safety circuits up to SIL 2 (high and low demand according to IEC 61508) (hardware fault tolerance HFT = 0).

The device is equipped with removable screw terminals.

- 4-channel
- 5 relay outputs
- Separate relay output for collective fault signals (NO)
- Configuration via rotary and DIP switches
- 4-channel operation or signal multiplexing (switchable)
- Adjustable output mode (NO/NC)
- Input circuits monitored for wire break/short circuit (can be switched ON/OFF)
- Complete galvanic isolation
- Input reverse-polarity protected
- Removable screw terminals
- ATEX, IECEx
- Use in Zone 2
- SIL 2

Type	IMX18-DI03-4S-5R-S/24VDC
ID	100028612
Nominal voltage	24 VDC (SELV/PELV)
Operating voltage	10...30 VDC
Power consumption	≤ 2.3 W
Power dissipation, typical	≤ 1.9 W

NAMUR input	
NAMUR	EN 60947-5-6
Input circuit monitoring	on/off switchable
No-load voltage	8.2 VDC
Short-circuit current	8.2 mA
Input resistance	1 kΩ
Cable resistance	≤ 50 Ω
Switch-on threshold	1.75 mA
Switch-off threshold	1.55 mA
Wire breakage threshold	≤ 0.06 mA
Short-circuit threshold	≥ 6.4 mA

Output relay – Load curve

Output circuits	
Output circuits (digital)	5 x relays (NO)
Output switching voltage relay	≤ 30 VDC / ≤ 250 VAC
Switching current per output	≤ 2 A
Switching capacity per output	≤ 500 VA/60 W
Switching frequency	≤ 15 Hz
Load type	Resistive load

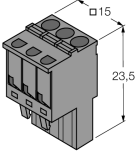

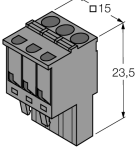

Galvanic isolation	
Test voltage	2.5 kV RMS
Output to supply	300 V RMS acc. to EN 50178 and EN 61010-1
Output to output	300 V RMS acc. to EN 50178 and EN 61010-1
Input to supply	375 V peak value acc. to EN 60079-11
Input to output	375 V peak value acc. to EN 60079-11

Important note	For Ex-applications the values specified in the corresponding Ex certificates (ATEX, IECEx, UL, etc.) apply.
Ex approval acc. to conformity certificate	TÜV 14 ATEX 147004 X
Application area	II (1) G, II (1) D
Ignition protection category	[Ex ia Ga] IIC; [Ex ia Da] IIIC
Application area	II 3 (1) G
Ignition protection type	Ex nA nC [ia Ga] IIC T4 Gc
Important note	If the device is used in applications to achieve functional safety according to IEC 61508, the safety manual must be used. Information in the data sheet are not valid for functional safety.
Use in SIL safety circuits	SIL 2 acc. to IEC 61508

Displays/Operating elements	
Operational readiness	Green
Switching state	Yellow
Error indication	red

Mechanical data			
Protection class	IP20		
Flammability class acc. to UL 94	V-0

Accessories

Type code	Ident no.		Dimension drawing
IM-SC-3X4BK	7541215	Screw terminals for IM modules (Ex devices with 18-mm overall width); includes: 4 pcs. 3-pin black terminals.	
IM-SC-3X2BU/2BK	7541216	Screw terminals for IM modules (Ex devices with 18-mm overall width); includes: 2 pcs. 3-pin blue terminals and 2 pcs. 3-pin black terminals.	
WM1 WIDER-STANDSMODUL	0912101	The resistor module WM1 meets the requirements for line monitoring between a mechanical contact and a TURCK signal processor. The input circuit of the signal processor is designed for sensors acc. to EN60947-5-6 (NAMUR) and equipped with a wire-break and short-circuit monitoring function.
