

## STBVR81Q6 Photoelectric Sensor – Touch Switch For Two-Hand Control System

## Technical data

| Туре                  | STBVR81Q6                           |
|-----------------------|-------------------------------------|
| ID                    | 3064192                             |
| Optical data          |                                     |
| Function              | Touch Button                        |
| Light type            | IR                                  |
| Electrical data       |                                     |
| Operating voltage     | 2030 VDC                            |
| Operating voltage     | 2030 VAC                            |
| Output function       | Complementary contact, Relay output |
| Switching frequency   | ≤ 25 Hz                             |
| Mechanical data       |                                     |
| Design                | Rectangular, STB                    |
| Dimensions            | 51 x 69 x 74 mm                     |
| Housing material      | Plastic, PBT                        |
| Electrical connection | Connector, M12 × 1                  |
| Ambient temperature   | 0+50 °C                             |
| Protection class      | IP66                                |
| Power-on indication   | LED, Green                          |
| Switching state       | LED, Green                          |
| Error indication      | LED, green, Flashing                |
| Tests/approvals       |                                     |

## Features

- M12 × 1 male, 5-pin
- Protection class IP66
- Ergonomically shaped
- Upper housing part of polyetherimide
- Operating voltage: 20...30 V AC/DC
- Relay output, 125 VDC / 150 VAC, 1A DC / AC 0.4 A max.
- Pre-assembled protective cover
- Safety category 4 according to EN ISO 13849-1 for use with corresponding evaluation relays
- SIL 3 acc. to IEC 61508 and IEC 62061

## Functional principle

The Duo-Touch two-hand control system can be used as a triggering device for most motor driven machines whose machining cycle is controlled by an operator. If a two-hand control system is used as a protective device, both of the operators hands must be used to start the machine cycle. The operator is thus placed in a form of "protective custody" if a hazard exists from which the operator must be protected or must avoid. The control elements of the two-hand control system must be arranged so that the hazardous motion (e.g. closing of a punching press) is completed or stopped before the operator can release one or both keys and reach the hazard area. Both hands must be used simultaneously. Both keys must be pressed within a time of max. 500 ms (simultaneity requirement according to EN 574).
