

# excom I/O System

## Input Module, Analog, Passive, 4-channel

### AI41EX

The input module AI41Ex is used for the connection of 4-wire transducers (passive input = sink mode / transducer active).

The module features protection class Ex ib IIC and can be mounted in zone 1 in combination with excom. The ignition protection type of the inputs is Ex ia IIC.

The inputs are galvanically isolated from each other.

The resolution is 14 bit, i.e. the analog value between 0...21 mA is represented as a number between 0 and 16383. For clear reading, the digitized value is displayed in a range of 0 ... 21000 and transmitted to the host system. For transmission to the host system, voltage is indicated as a value in a range between 0... 10000.

- Input module for the connection of active transmitters (passive inputs)
- Complete galvanic isolation
