Relay Module, 6-channel

DO60R-N

The relay module DO60R-N is used for the connection of non-intrinsically safe actuators such as valves or indicator lights.

The outputs are designed as zero-potential relay contacts.

- 2 x changeover contacts (channel 1 and 2)
- 4 x NO contacts (channel 3 to 6)

The channels 3/4 and 5/6 are separately switchable to changeover function. For this, an external bridge at the terminals is needed.

Note:

To protect the module rack, the contact circuits inside the DO60R-N module are shielded by fuses (1.5 AT Ceramic). The module must be replaced after tripping the fuses. The connections 12-13 and 22-23 are not further protected and should maximally be loaded with the switching current of a relay contact. Use preferably terminal 12 resp. 22 for connection.

For non-destructive operation, even in the event of a short circuit, a back-up fuse with a fuse integral $< 2.1A^2s$ must be used (e.g. ESKA 522.714).

Status and error messages of the single outputs and the module are indicated via LEDs on the front.

- Relay output for higher switching capacity
- NO/NC configurable output
- Configurable as 4 x changeover contact
- Configurable as 6 x NO contact
