

Isolating transducer 1-channel IM33-11-HI/24VDC

The 1-channel HART[®]isolating transducer IM33-11-HI/24VDC is designed to operate HART[®]2-wire transducers (III) and to transmit galvanically isolated signals. In addition to the analog signals, also the digital HART[®]communication signals can be transmitted bidirectionally.

Alternatively, active 2-wire HART[®]transmitters (II) and passive 3-wire HART[®]transmitters (I) can be operated.

The device features one input and one output circuit, each with 0/4...20 mA. A green LED indicates operational readiness.

The input signals are transmitted 1:1 without interference and made available at the output. The removable terminal blocks feature test sockets (Ø 2 mm) for connection of a HART[®]handheld.
