

July 2019

Information regarding the inclusion of Lead SVHC Candidate List according to the EU Regulation (EC) No.1907/2006 (REACH)

Turck is aware of the importance of the various requirements regarding the national, European and international legislation and enforces internal compliance with these requirements.

REACH Regulation (EC) No.1907/2006

Articles delivered by Turck do not require registration under regulation **(EC) No.1907/2006**, as REACH regulates the usage of chemicals and basic materials. Turck articles are electrical and electronic assemblies and end products which do not emit any substances within the definition of the regulation under reasonable and predictable standard applications during their life span.

In respect of article 33 (1) of the REACH regulation, our suppliers of components and goods, are obliged to provide us with sufficient information on **Substances of Very High Concern** ("SVHC"), published twice a year on the candidate list by ECHA. As a downstream user we have to forward this information, provided that a substance is contained in a product in a concentration above 0.1 % by weight.

Information on the use of lead (CAS No. 7439-92-1):

Lead (Pb) is present as an alloy component in concentrations of < 4% in many copper alloys such as Brass. Copper alloys are used in various manufactured Turck products. When Turck products are used in their intended applications, it is to our best knowledge no danger or harm will come to the environment or humans.

RoHS Directive 2011/65/EU

The European Directive **2011/65/EU** regulates the **Restriction of the use of certain Hazardous Substances** in electrical and electronic equipment ("RoHS").

The CE mark on finished Turck products demonstrates compliance with this directive. Amendments by the Delegated Directive **(EU) 2015/863** are taken into account. CE marked products require a Declaration of Conformity (DoC) and associated technical documentation. Responsibility for this DoC resides with the manufacturer. An EU-DoC is available for Turck products which are in scope of the Directive.

Articles out of scope manufactured by Turck are not stated on a EU-DoC. Turck provides a Manufacturer Declaration for these sellable articles on request.

For further questions do not hesitate to contact us.
